Application No:: 10/734,598 2 Docket No.: 03910/0200611-US0

## **AMENDMENTS TO THE CLAIMS**

1. (Currently amended) Paver, including a paving screed having at least one working component in the form of a smoothing plate comprising:

at least one electric heating element secured in heat transferring condition in a heating area of said working component, wherein said at least one heating element is a planar heating element comprising;

a planar carrier;

a heating coil forming a heating conductor wound in a spiral around said planar carrier, wherein the peripheral contour of said carrier and/or the winding density or the course of the windings of said heating conductor adapted varies along the length of said carrier to produce a predetermined non-uniform heating picture in the heating area of said working compound component.

- 2. (Original) Paver as in claim 1, wherein said heating conductor has a band-shaped cross-section with a band width between 1.0 mm and 4.0 mm and a band thickness between about 0.1 mm and 0.4 mm.
  - 3. Cancelled.
- 4. (Currently amended) Paver as in claim 1, further comprising at least one further heating conductor wound around said carrier, said further heating conductor adapted to further be connected to a power supply.
- 5. (Currently amended) Paver as in claim 1, further comprising a damp course provided in the interior of a housing element at least at the side of said carrier onto

Application No.: 10/734,598 3 Docket No.: 03910/0200611-US0

which the heating conductor is wound and which is opposite to the heating area of said working component.

- 6. (Original) Paver as in claim 1, wherein said carrier around which said heating conductor is wound is enclosed between cover sheets.
- 7. (Currently amended) Paver as in claim 1, wherein said planar heating element has a total thickness of between about 4.0 mm and 10.0 mm, and said carrier, around which said at least one heating conductor is wound, has a substantially uniform thickness in the range of between about 1.0 mm and 3.0 mm.
- 8. (Currently amended) Paver as in claim 1, wherein said planar heating element has a length between about 0.9 m to 1.2 m and a width of between about 50 mm to 100 mm, and has a power consumption of between about 500 watts and 1,000 watts, preferably of about 600 watts.
- 9. (Currently amended) Paver as in claim 1, wherein said <del>planar</del> heating element further comprises breakouts for accepting fastening elements of said working component, said breakouts penetrating said carrier between spaced apart windings of said heating conductor.
  - 10. (Original) Paver as in claim 6, further comprising: spacing elements on one of said cover sheets;

a connection box fixed to the side of said planar heating element which is opposite to the heating area on said spacing elements and a sealed introduction for a connection cable provided in a side wall of said connection box which introduction is oriented

Application No:: 10/734,598 4 Docket No.: 03910/0200611-US0

substantially horizontal in the operating position of said heating element of said working component.

- 11. (Original) Paver as in claim 6 wherein said cover sheets are of metal and the lower cover sheet forms a heat distributing intermediate member or is abutting on a heat distributing intermediate member respectively, said cover sheets being sealed and connected with each other in the edge region of the heating element around the periphery of said cover sheets.
- 12. (Original) Paver as in claim 1 wherein said heating element further comprises two carrier material strips extending longitudinally and are juxtaposed, at least one of said strips having a cut-out in its edges as the boundary of a breakout, and said heating conductor being wound around the edge of the cut-out.
- 13. (Original) Paver as in claim 1, wherein said working compound is a metal smoothing plate that is to contact the paving laid by the paver.
- 14. (Currently amended) A planar heating element for a working component of a paver, particularly of a smoothing plate comprising:
  - a planar carrier;
- a first and at least one second heating conductor for selective supply with current;

said first and <u>said at least one</u> second heating conductors being wound in spiral windings around said carrier, the outer-contour form of said carrier and/or wherein the winding density and/or the course of the windings of said heating conductor adapted

Application No:: 10/734,598 5 Docket No.: 03910/0200611-US0

<u>conductors are varied for each</u> to produce a predetermined <u>non-uniform</u> heating picture within the heating area, respectively.

15. (New) Paver as in claim 1, wherein said heating conductor comprises a pair of wires that are spaced apart.
